Ramiro Benitez

Full Stack Developer | Applied AI and automation

Buenos Aires, Argentina | ramiromarcelobenitez@gmail.com
linkedin.com/in/ramabeni94 | github.com/ramabeni94dev

Full Stack Developer with 7+ years of experience building business applications, integrations and automation. I combine React, Next.js, Node.js and PostgreSQL with Python and applied AI to connect business processes, data and user interfaces. Hands-on across the product lifecycle, from data modeling and APIs to deployment and ongoing development.

Professional experience

Full Stack Developer · GÖTTERT

August 2019 - Present | Buenos Aires, Argentina

- Develop and maintain internal applications for sales operations, CRM, HR, production, supplies, delivery notes and technical service.
- Build React, Next.js and TypeScript interfaces, complex forms and operational workflows connected to Node.js, NestJS, Express and Azure Functions APIs.
- Implement data models and business logic with PostgreSQL, PL/pgSQL, SQL Server and Sequelize, focusing on traceability and process consistency.
- Contribute to OpenAI-powered support, email and workflow tools, as well as deployments and CI/CD using Azure, Docker and GitHub Actions.

Freelance Full Stack Developer · Own projects and clients

2023 - Present

- Build web products and custom solutions under NexoWorks, including AI video analysis, conversational assistants, CRM and operational applications.
- Implement integrations and automation with Python, FastAPI, Selenium, MQTT and Odoo XML-RPC; develop mobile experiences with React Native and Expo.

Technical skills

Frontend and mobile: React, Next.js, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, React Native, Expo.

Backend and data: Node.js, NestJS, Express, Python, FastAPI, REST, PostgreSQL, pgvector, Prisma, SQLAlchemy, SQL Server.

Applied AI: OpenAI API, RAG, embeddings, semantic search, transcription, multimodal analysis, OpenCV and MediaPipe.

Architecture and delivery: Celery, Redis, FFmpeg, S3/MinIO, Docker, Azure, Railway, Vercel, GitHub Actions, pytest, Playwright.

Selected projects

Applied AI, service architecture and business systems

OCEANS | Multimodal video analysis platform

Next.js · TypeScript · FastAPI · Celery · PostgreSQL/pgvector · OpenAI

- Decoupled API and Python worker architecture: private S3/MinIO uploads, FFmpeg processing, persisted progress, retries and idempotency.
- RAG copilot over transcripts and analysis windows, using vector search to deliver evidence-based answers with references to exact video timestamps.
- Integrated face detection and tracking with YuNet, MediaPipe and FER+, audio signals and an interactive timeline synchronizing text, voice and video.
- Organization-level isolation, revocable sessions, CSRF and Redis rate limits; API, processing and browser workflow tests.

Camax Neumáticos | Sales, inventory and receivables management

Next.js · TypeScript · Prisma · PostgreSQL · S3

- Adapted NextCRM for a tire distributor, connecting the product catalog, stock, delivery notes, invoices, receipts, checks and customer balances.
- Invoicing from one or multiple delivery notes, payment transfer and balance controls to avoid duplicate debt; automatic FIFO allocation and manual adjustments.
- Operation-level permissions, financial audit trails and PDF generation with recovery from storage failures.

NexoWorks Chatbot | Sales assistant with RAG and voice

Next.js · OpenAI · Embeddings · Firebase/Firestore · Nodemailer

- Editable knowledge base, document chunking and hybrid semantic and lexical retrieval for contextual responses with streaming.
- Lead capture flows, Firestore persistence, email notifications, and speech transcription and synthesis endpoints.

NexoWorks CRM | Extensions for sales and operational management

Next.js · TypeScript · Prisma · PostgreSQL · S3

- Customized NextCRM for sales and customer management, with operation-level permissions and audit trails.
- Isolated demo environments and a read-only role for controlled product demonstrations.

Care center management | Scheduling, patients and a self-service portal

Next.js · Prisma · PostgreSQL · Railway

- Adapted a CRM foundation to manage practitioners, appointments, consultations, documents and payments, with access controls and audited transitions.
- Separate patient portal, appointment requests and database migrations isolated for the care management domain.

B2B quotation platform | Public catalog and internal sales tools

Next.js · TypeScript · Prisma · PDF · Excel

- Quote requests without public pricing, quantity rules, SKU imports and immutable quote versions with PDF output; transactional persistence and idempotency.
